COSMO CONSULT

Business-Software for People

WHY?

The screenshot shows the Azure DevOps web interface. The browser address bar displays the URL `https://dev.azure.com/cc-demo-devops/Hello-World-Build/_build`. The page title is "Pipelines - Recent". The main header includes the "Azure DevOps" logo, a search bar, and a "TF" (Team Foundation) icon. The left sidebar contains navigation icons for Home, Pipelines, Repos, Builds, Test, and Settings. The main content area is titled "Pipelines" and has tabs for "Recent", "All", and "Runs". A "New pipeline" button is in the top right. Below the tabs, there is a "Filter pipelines" input field. The "Recently run pipelines" section displays a table with the following data:

Pipeline	Last run
 Hello-World-Build	#2.0.5.0 • initial Manually trigger  m...  18m 8s

Standard agent on Azure (free): no caching

WHY?

The screenshot shows the Azure DevOps web interface in a browser window. The address bar displays the URL `https://dev.azure.com/cc-demo-devops/Hello-World-Build/_build`. The page title is "Pipelines - Recent". The main header includes the "Azure DevOps" logo, a search bar, and navigation icons. The left sidebar contains icons for Home, Pipelines, Builds, Releases, and other tools. The main content area is titled "Pipelines" and has tabs for "Recent", "All", and "Runs". A "New pipeline" button is in the top right. Below the tabs, there is a "Filter pipelines" input field. The "Recently run pipelines" section shows a table with the following data:

Pipeline	Last run
 Hello-World-Build	#20201003.30 • back to... Individual CI for mas... 3m ago 2m 22s

The "2m 22s" duration is highlighted with a yellow box. The status bar at the bottom indicates "Waiting for dev.azure.com..."

Custom compiler on standard agent on Azure (free)

HOW?

1. Use nanoserver base image* and process isolation as that starts fastest
2. Have everything (compiler, symbols, assemblies) ready in the image, so you don't need to wait for BC to start
3. Have nothing else in the image, so it is smaller and quicker to pull

* Only possible if you don't have custom .net

HOW? – A QUICK PRIMER ON DOCKER IMAGE BUILDS

Dockerfile

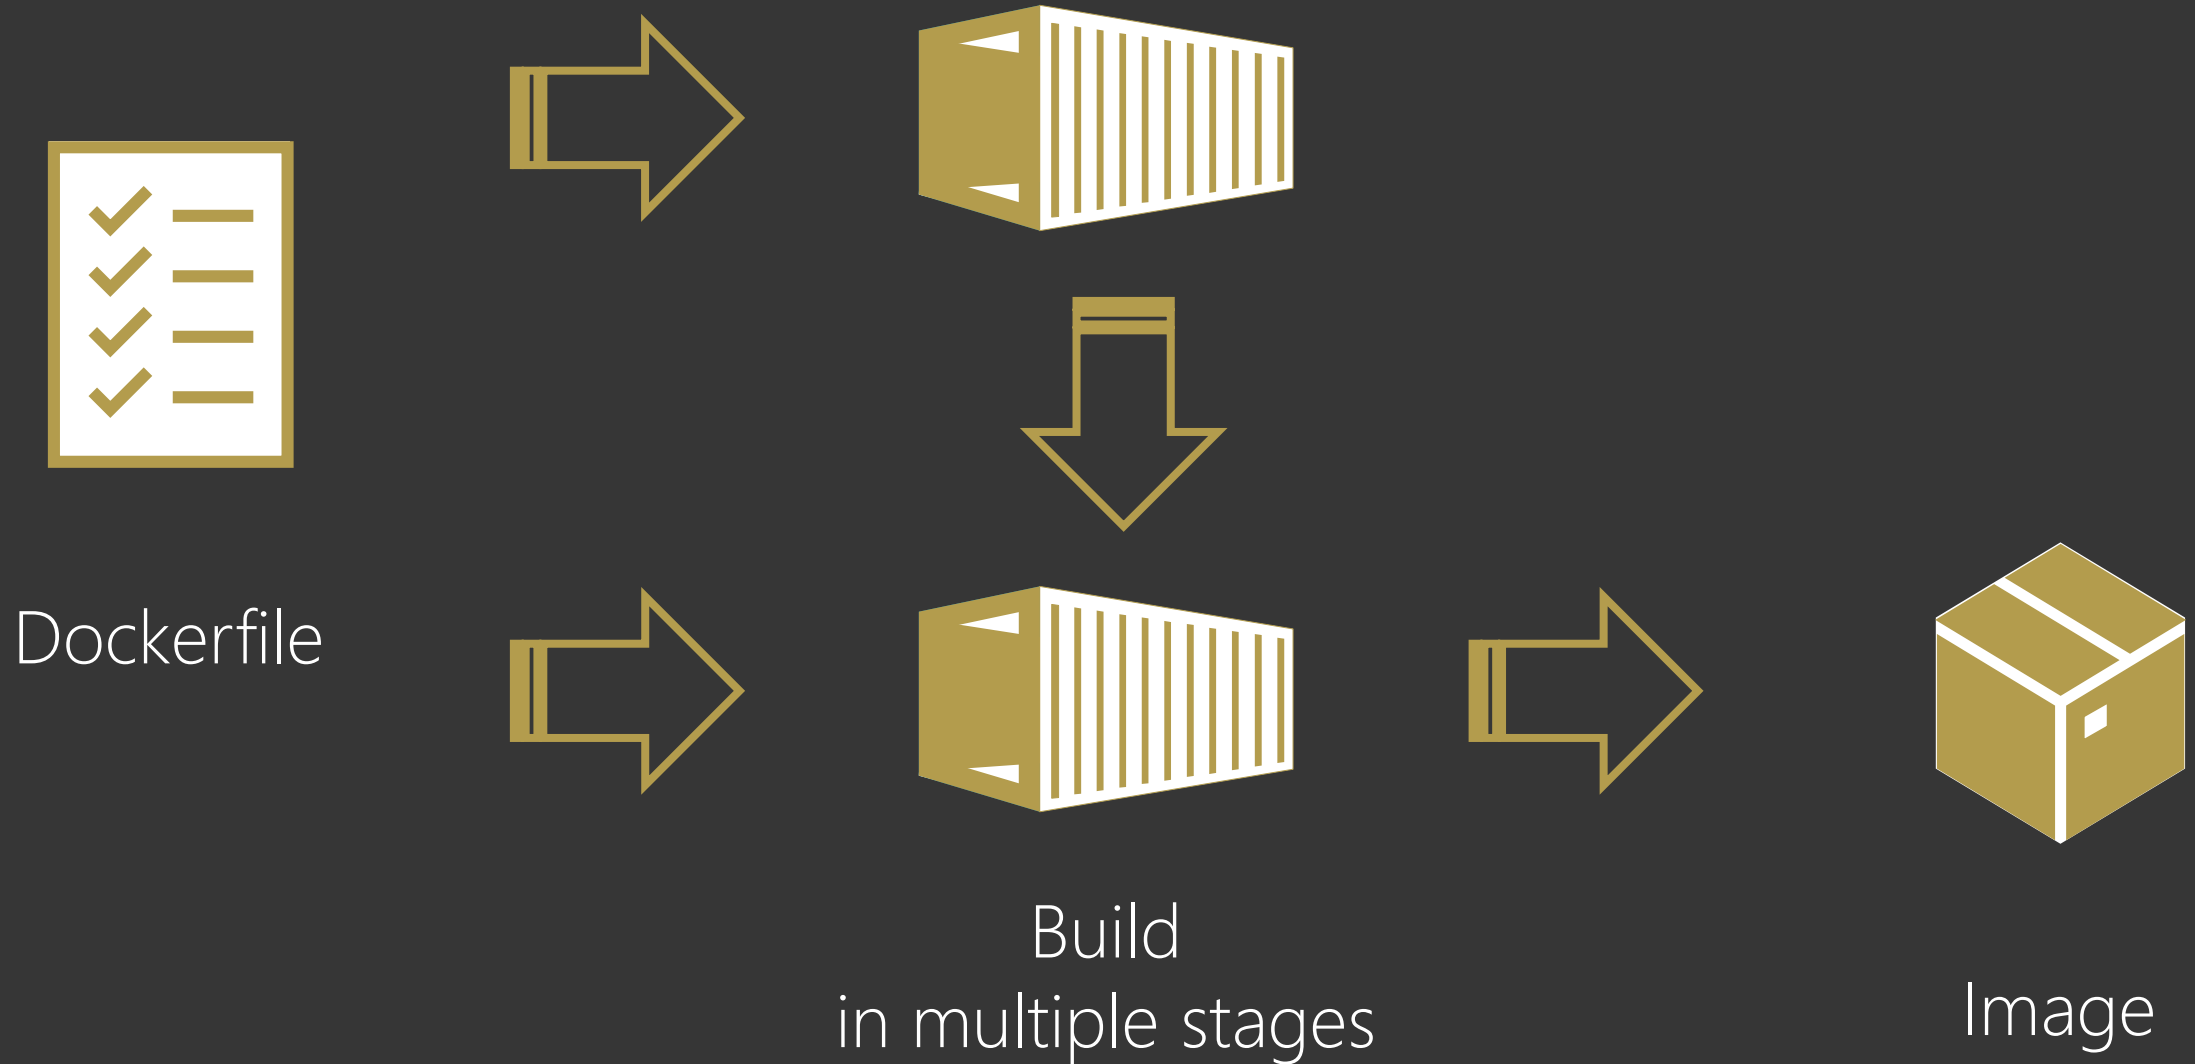

Image

Build

(runs a container
following instructions
in Dockerfile)

HOW? – MULTI-STAGE DOCKER IMAGE BUILDS

HOW? – MULTI-STAGE DOCKER IMAGE BC COMPILER

First stage

1. navcontainerhelper
2. Artifact download
3. Collect prereqs, vsix, dependencies, assemblies
4. Expand vsix
5. Copy everything in place

Second stage

1. Copy extension, artifacts, assemblies
2. Create dummy ruleset
3. Prepare compiler call depending on whether sources contain .netpackages

Windows Server Core

Nano Server (if no .net)

cosmo-compiler - Visual Studio Code - Insiders

Dockerfile

AL

COMMUNITY!

The screenshot shows the GitHub repository page for `cosmoconsult/cosmo-compiler`. The repository has 2 watches, 3 stars, and 1 fork. The main content area displays a list of files and their commit history:

File	Commit Message	Time
<code>.gitignore</code>	initial	2 months ago
<code>Convert-ALC-Output.ps1</code>	initial	2 months ago
<code>Dockerfile</code>	Fix missing Windows Assembly folder in Nanose...	2 months ago
<code>Dummy.ruleset.json</code>	initial	2 months ago
<code>LICENSE</code>	initial	2 months ago
<code>README.md</code>	Fixing readme (#2)	2 months ago
<code>azure-pipelines.yml</code>	Pipeline parameters (#4)	2 months ago

On the right side, the 'About' section describes the repository as 'Dockerfiles for creating an ALC compiler image with all default dependencies from Microsoft'. Below this, the 'Contributors' section lists four contributors, with a box highlighting the first three:

- tfenster Tobias Fenster
- NAVRockClimber
- dNsl9r Danis F.
- RockClimber81
